End user software license agreement

This End User Software License Agreement (the **EULA**) is a legal agreement between you and Sony Corporation (hereinafter referred to as **Sony**), a corporation organized under Japanese Law, the manufacturer of your **Sony** computer system (the **SONY HARDWARE**). Please read this EULA carefully before installing or using the software distributed together with this EULA (the **SONY SOFTWARE**). By installing or using the SONY SOFTWARE, you agree to be bound by the terms of this EULA. You may use the SONY SOFTWARE only in connection with the use of the SONY HARDWARE. SONY SOFTWARE is licensed; not sold.

Notwithstanding the foregoing, software distributed together with separate End User Software License Agreement (the **Third Party EULA**), including but not limited to Windows® operating system provided by Microsoft Corporation, shall be covered by the Third Party EULA.

If you do not agree to the terms of this EULA, please return the SONY SOFTWARE together with the SONY HARDWARE to the place where you obtained it.

1. License. This SONY SOFTWARE and the related documentation are licensed to you by **Sony**. This EULA allows you to use the SONY SOFTWARE for your personal use for a single SONY HARDWARE outside a network and only to make one copy of the SONY SOFTWARE in machine-readable form for back-up purposes only.

2. Restrictions. The SONY SOFTWARE contains copyrighted material and other proprietary material. In order to protect them, and except as permitted by applicable law, you may not decompile, reverse engineer or disassemble the SONY SOFTWARE in whole or in part. Except for the transfer of the SONY SOFTWARE together with the SONY HARDWARE and prior agreement of the recipient to be bound by the terms and conditions of this EULA, you may not sell or rent the SONY SOFTWARE and its copy to any third party.

3. Limited Warranty. Sony warrants the media on which the SONY SOFTWARE is recorded to be free from physical defects for a period of ninety (90) days from the date of purchase as evidenced by a copy of the receipt. During the applicable warranty period, **Sony** will replace free of charge such media proved to be defective, provided they are returned properly packaged to the place where you obtained it, together with your name, address, and proof of date of purchase. **Sony** will have no responsibility to replace media damaged by accident, abuse, or misapplication. The above limited warranty replaces all other representations, conditions and warranties, whether express or implied, by statute or otherwise and **Sony** expressly disclaims all other warranties and all conditions including, but not limited to, the implied warranties and/or conditions of satisfactory quality and fitness for a particular purpose. The terms of this limited warranty do not affect or prejudice your statutory rights as an ultimate consumer, neither do they limit or exclude any liability for death or personal injury caused by the negligence of **Sony**.

4. Termination. This EULA is effective until terminated. You may terminate this EULA at any time by destroying the SONY SOFTWARE, related documentation, and all copies thereof. This EULA will terminate immediately without notice from Sony, if you fail to comply with any provision of this EULA. Upon termination you must destroy the SONY SOFTWARE, related documentation, and all copies thereof.

5. Governing Law. This EULA shall be governed by and construed in accordance with the laws of Japan.

Should you have any questions concerning this EULA or this limited warranty, please refer to the Customer Service Guide on how to contact VAIO-Link.

About the software on your notebook

Your Sony notebook is ready to help you work, play, learn, and communicate as soon as you turn it on. This section gives you an overview of what you can do with the software installed on your notebook.

Sony software

Center Jog Dial™ Control

Sony Electronics

The Jog Dial™ utility allows you to configure the Jog Dial™ on your computer. In this application, you can select the Sony applications, or others, that you want the Jog Dial™ to pilot; you can also configure the Jog Dial™ to start any application, establish a dial-up connection, or read an e-mail, simply by turning and pressing the Jog Dial™. Finally, the Jog Dial™ utility allows you to configure your i.LINK™ connections, and to set a Timer that can launch any application at a specific time. The back button on the right of the Jog Dial™ allows you to go back to the previously defined Jog Dial™ configuration.

DVgate

Sony Electronics

DVgate is a kit of 3 complementary applications: DVgate Motion, DVgate Still, and DVgate Assemble. This collection makes it easy to select and edit digital video clips, then bring them together into a professional-looking home video. Use i.LINK™ to connect your digital video camera, and the computer operates as an editing desk that can capture, preview, cut and assemble your selection and save the sequences in AVI and MPEG1 formats. DVgate Still displays digital video images sent from a digital video cassette recorder or a digital video camera recorder (only possible if you have DV In/Out on your camera), and saves them as graphic files on your hard drive.

Memory Stick Formatter

Sony Electronics

Memory Stick Formatter is a special software for formatting Memory Sticks™. Use this software whenever you reformat Memory Sticks™. Moreover, you may be able to (re)format Memory Sticks™ that can not be identified on Windows® by using this software. Memory Stick Formatter supports Memory Sticks™ with the following capacities: 4MB, 8MB, 16MB, 32MB, 64MB, 128MB. When you format Memory Sticks™ with this software, all data on the Memory Stick™ will be lost. If necessary, perform a backup of your data before formatting.

MovieShaker

Sony Electronics

MovieShaker® creates personal movies - complete with transitions, special effects, background music, and text. All you do is import your clips, pick the tune you want and MovieShaker® does the rest. You can also choose to take control and produce your very own movie. You choose the exact clips order, special effects, and transitions. You can also import your own music and MovieShaker® will automatically match the length of the song to the length of your movie.

OpenMG Jukebox

Sony Electronics

OpenMG is a copyright protection technology developed by Sony Corporation and designed to allow recording and playback of digital music data on a personal computer. Once the data is encrypted and recorded onto the hard disk, OpenMG technology allows it to be played back on the PC but prevents unauthorized distribution. The purpose of OpenMG technology is to create an environment in which larger quantities of high-quality music can be distributed without subsequent unauthorized distribution of the

music files. Open MG Jukebox is the software element within the OpenMG system that encrypts and manages music files either downloaded to a personal computer by using the EMD services or adopted (or created) from your own CD or the Internet.

PictureGear

Sony Electronics

Create your own environment with the Digital Image Library (photos, backgrounds, wallpapers, slide shows, etc). PictureGear is your assistant for creating and implementing personal screen savers, panoramas (combined images)... You can even animate your preferred gif files with Gif Animation Tools, create labels for all media with PictureGear Label Maker, or play back movies in a variety of formats. You can also create albums from your favourite images and upload them to a Web page.

PowerPanel

Sony Electronics

The PowerPanel utility controls the power management of your notebook and provides key information about system activity and battery life. Automatic power management selects the most appropriate profile, depending on the application you are working with and the conditions of use.

Smart Capture

Sony Electronics

Connect a digital camera to your computer to shoot still images and video clips, which you can view or send by e-mail. The Smart Capture Finder displays images from the camera and allows you to adjust the settings or create effects. Smart Capture enables you to capture images via i.LINK™ compatible devices or create a panorama picture using the panorama assist function. The final panorama will be created in PictureGear, using the individual snapshots made in Smart Capture.

Smart Connect and Smart Connect Monitor

Sony Electronics

With Smart Connect and Smart Connect Monitor you can copy, edit or delete files on another VAIO computer (equipped with Smart Connect) connected to your computer with an i.LINK™ cable. You can also print a document on a printer connected to another VAIO computer.

Sony Notebook Setup

Sony Electronics

Use Sony Notebook Setup to consult system information, specify preferences for system behavior, and change hardware settings for your Sony notebook.

UI Design Selector

Sony Electronics

You can change the window design of the Sony software compatible with UI Design Selector.

VisualFlow

Sony Electronics

VisualFlow allows you to browse interactively through the contents of your Memory Sticks™ (optional), your hard drive, or any other drive on your computer. VisualFlow can display Memory Stick™ files in a variety of ways, and allows you to play / display still images, movies or sound files within VisualFlow or with other software.

Product Recovery CD-ROMs

Sony Corporation

The Product Recovery CD-ROMs allow you to reinstall the system, the software shipped with your computer and the bundled device drivers if they are corrupted or accidentally erased. Reinstalling an individual device driver may correct a problem you are experiencing with your computer, without you having to recover the entire system.

! You can only use the Recovery CD-ROMs on the Sony notebook you purchased, and not on any other Sony PC or other manufacturer's PC.

Operating system and other pre-installed software

Windows® 2000 SP1

Microsoft Corporation

Microsoft® Windows® 2000 SP1 (Service Pack 1) makes your computer work better by integrating tightly with the Internet and networks and providing better system performance and easier system diagnostics and maintenance.

With Windows® 2000 SP1, your system takes better advantage and has improved support of the latest graphics, sound, and multimedia technologies. Easy addition and removal of peripheral devices, and the convergence of the TV and PC in your home are also featured.

This exciting operating system is built on the groundbreaking features introduced with Windows® NT. At the same time, Windows® 2000 SP1 maintains the best support for older Windows-based applications and technologies.

Using Smart Capture

You can use Smart Capture to shoot still images and record video clips from a digital camera connected to your computer.

Capturing still images

You can capture still images from i.LINK™ compatible devices.

To capture still images, proceed as follows:

- 1 Connect an i.LINK™ compatible device to your notebook.
- 2 Launch **Smart Capture** from the **Start** menu, in **Programs / Smart Capture / Smart Capture**.
The **Finder** window appears, displaying the image of the subject.
- 3 Adjust the focus on the subject.
- 4 Click the **Capture** button in the **Smart Capture** window.
The **Still Viewer** window appears with the image you shot in the **Still Image Display** area.
- 5 To end **Smart Capture** click the  button in the top right corner of the window.

Displaying captured images in Still Viewer

From the **Start** menu, select **Programs / Smart Capture** and click **Still Viewer**. You can display, save or delete your images or send them by e-mail.

To end **Still Viewer**, click the  button.

 You can capture still images in the following sizes: 640 x 480, 320 x 240, 160 x 120 and 80 x 60 pixels.

When capturing a small resolution image (i.e., 80 x 60 pixels), the displayed image on the **Finder** window may appear blurred.

A gap may appear when a rapid-moving object is displayed. However, this is not a malfunction.

You can create a panorama picture by using **PictureGear 2.5SE** or higher.

You can capture still images and video clips from a digital video camera using **Smart Capture**.

Sending still images via e-mail

To send still images via e-mail, proceed as follows:

- 1 Click the **Start** button on the **Windows**[®] taskbar.
- 2 Point to **Programs** and click **Smart Capture**.
- 3 Click **Still Viewer**.
- 4 Select the still image you want to send via e-mail, using  or .
- 5 Click **Mail**.
Your e-mail window appears with the selected file attached to your message.
- 6 Send the e-mail.

 You need to set up MAPI (Messaging Application Program Interface) when using the e-mail software. MAPI is a Microsoft[®] Windows program interface that enables you to send e-mails from within a Windows application and to attach the document you are working on to the e-mail note.

Shooting video clips

With a video camera connected to your computer you can use **Smart Capture** to capture video clips, as well as play them or send them via e-mail.

To capture video clips, proceed as follows:

- 1 Launch **Smart Capture**.
- 2 Select **Movie** using the **Switch Capture Mode** button.
The image appears in the **Finder**.
- 3 Turn the camera towards the subject.
- 4 Adjust the image.
- 5 Click the **Capture** button to shoot a video clip (you can shoot up to 60 seconds, according to the settings you chose in the **Recording options** section).
- 6 Click the **Capture** button when finished.
The **Movie Player** window appears, it contains the captured video clip.
- 7 Click ► to playback the images. Click || to pause, ■ to stop playback.
- 8 To end **Smart Capture**, click .

 You can shoot video clips in the following formats:

Non-compressed:

- Video 160 x 120, 24 bits, max. 10 frames/sec.
- Audio PCM, 11.025 kHz, 16 bits, monophonic

Compressed:

- Video MPEG1 160 x 112, maximum of 30 frames/sec.).
- Audio MPEG1, 44.1 kHz (effective maximum equivalent to 11.025 kHz), monophonic.

A gap may appear when a rapid-moving object is displayed. However, this is not a malfunction.

Sending video clips via e-mail

If you shoot a video clip in a low resolution format, its size will be reasonable and can therefore be sent by e-mail.

To send video clips via e-mail, proceed as follows:

- 1 Click the **Start** button on the **Windows**[®] taskbar.
- 2 Point to **Programs** and then **Smart Capture**.
- 3 Click **Movie Player**.
- 4 Click **Mail**.
The **Compression Settings** window appears.
- 5 Choose the compression rate by moving the slider.
- 6 Click **Start Compression**.
When compression is completed, a window message asks you if you want to attach the file to your e-mail.
- 7 Accept and send the e-mail.

Customizing your notebook

The following sections briefly describe how to change the main settings of your notebook. Among other things, you will learn how to prepare your modem for use, how to use and customize the look of your Sony software and utilities, etc.

Configuring your modem

Before you can start using your internal modem, or each time you use your modem while travelling, make sure that the country of the active location defined in the **Phone and Modem Options** dialog box matches the country you are dialing from.

To configure your modem, proceed as follows:

- 1 Click **Start**, point to **Settings**, and click **Control Panel**.
- 2 Double-click **Phone and Modem Options**.
The **Phone and Modem Options Properties** dialog box appears.
- 3 Double-click the currently selected location on the **Dialing Rules** tab.
If more than one location is available, double-click the location that is highlighted.
The **Edit Location** dialog box appears.
- 4 Check the country/region settings, and make sure it matches the place you are dialing from.
- 5 If you modified your location settings, click **Apply** on the **Dialing Rules** tab, and then click **OK**.

Before applying new country settings, please make sure your phone line is disconnected from your VAIO notebook.

Changing your window design

You can change the window design of Sony software compatible with **UI Design Selector**.

To change the window design using UI Design Selector, proceed as follows:

- 1 Click **Start**, point **Settings**, then click **Control Panel**.
- 2 Double-click **UI Design Selector**.
The **UI Design Selector** dialog box appears.
- 3 Click on << or >> and select the design you like.
- 4 Click **Apply**.
The **UI Design Selector** window design changes, to give you a preview of the design you chose for the Sony software.
- 5 To try another design, click on << or >>.
- 6 Click **OK** once you are satisfied with your choice.
The **UI Design Selector** dialog box disappears and changes the window design of Sony software as you selected.

Setting up your notebook

The **Sony Notebook Setup** utility allows you to consult system information, specify preferences for system behavior, and change hardware settings for your VAIO notebook.

To use Sony Notebook Setup, proceed as follows:

- 1 Click the **Start** button on the **Windows®** taskbar.
- 2 In **Programs**, select **Sony Notebook Setup**.
The **Basic** window appears; you can then enhance the features by clicking the **Basic / Advanced** tab.
- 3 Select the tab for the item you want to change.
- 4 Once finished, click **OK**. This dialog box contains the following tabs:

<i>Tab</i>	<i>Description</i>
About This Computer	Displays system information, including memory capacity, serial number, and BIOS version.
Printer	Selects printer port mode settings.
Initial Setting	Selects the drive and device order you wish to use for loading the operating system. You can specify the hard drive as well as other drives inserted into your computer. You can change the volume of the sounds while the operating system is loading.
Touchpad	When you connect an optional mouse to your computer, you can disable your touchpad. You can also customize your mouse settings by means of the mouse utility.

<i>Tab</i>	<i>Description</i>
Power On Password	Sets the password to secure your computer. If you use this option, remember the password at all times. If you forget the password, you cannot change this setting anymore, and you will not be able to start your computer.
Enable Ports	Disables port release resources to the system. To change the serial settings, click Advanced on the Basic/Advanced tab.
Basic/Advanced	Toggles between Advanced mode (additional screens with advanced settings) and Basic mode of display. Advanced mode includes Serial and View Resources tabs.

For more information about each option, click **Help** on the **Notebook Setup** screen to display the help file.

Managing power

The **PowerPanel** utility controls the power management of your notebook and provides key information about system activity and battery life. The automatic power management selects the most advantageous profiles, or lets you customize the profiles you choose, according to your own needs, with the goal of extended battery life.

PowerPanel has the following features:

- ❑ Automatic Profile Selection (APS) based on the currently active application;
- ❑ Ability to select special Power Profiles manually from the menu;
- ❑ Ability to edit and create new profiles;
- ❑ Ability to display detailed battery information;
- ❑ It works in harmony with your Windows settings.

Activating PowerPanel

When starting the computer, the **PowerPanel**  icon appears in the system tray by default. When pointing on the **PowerPanel** icon, you will see a tooltip with the active power management profile. You can select a power profile from the menu or a power management profile by right-clicking this icon. You can use the **PowerPanel** toolbar as well.

To use the PowerPanel toolbar, proceed as follows:

- 1 Right-click the taskbar at the bottom of the screen.
- 2 Select **Toolbars** from the shortcut menu, then click **Power Management**.
The **Power Management** toolbar appears on the taskbar (you can change it into a floating window by dragging and dropping it on your desktop).
- 3 Click the first item in the toolbar to open the **Profile** menu.

- Click the button corresponding to the profile.
The appropriate power management setting will be activated.

 When you use the battery pack as power source, your system selects the **Maximum Battery Life** power management profile by default. If you select a different power management profile while using battery power, the same profile will automatically be selected the next time you use the battery pack to power your computer.

Activating power management profiles

PowerPanel provides several predefined **power management profiles**. Each profile consists of a group of specific power management settings that are designed to meet specific power management goals, ranging from maximum power management to no power management.

Main preset profiles

Icon *Description*

	Maximum Battery Life – Provides power saving features to give you maximum battery life and good performance. It reduces the brightness of the display and puts it into Standby mode after a specified time period.
	Maximum Performance – Provides the best system performance while still conserving power.
	AC Power – The power management state when AC power is in use. PowerPanel automatically loads the AC profile unless you disable this feature.
	Power Management Off – Turns off all power management features such as Standby and Hibernate modes.

Other preset profiles

<i>Icon</i>	<i>Description</i>
	Word Processing – Optimizes power management with longer timeouts on the hard disk and display screen. You can also establish settings for LCD (Video) Standby, Hard Disk Standby, and Standby to optimize power management for your system.
	Spreadsheet – Reduces the LCD brightness to 'medium', as your software does not require higher performance. The sleep timer is activated.
	Presentation – Keeps the display on at all times while it conserves power. This option is ideal for slideshow presentations. You can establish settings for LCD (Video) Standby, Hard Disk Standby, and Standby to optimize power management for your system.
	Communications – Extends battery life by initiating a quick display timeout. You can also establish settings for LCD (Video) Standby, Hard Disk Standby, and Standby to optimize power management for your system.
	Games – Disables the display and the Hard Disk Spindle Down timer.
	Camera – Optimizes performance and power requirements for camera usage.
	DVD – Optimizes performance and power requirements for DVD usage.
	Automatic Profile Selection - Analyses the performance of each application you choose and matches the profiles to its needs.

Activating power management commands

PowerPanel provides power management commands that you can use to activate specific power management functions and to control power for a specific device. You might use these commands when you want to override a profile setting or initiate an immediate action.

Icon Description

	Standby – Puts the system into Standby mode, a power management state that saves the state of the system and peripheral devices in memory (RAM). Power consumption is reduced to minimum, and the system remains on. To return the system to the active state, press any key or the power button on your computer.
	Hibernate – Sets the system to the lowest level of power consumption. The system writes the state of the system and peripheral devices to the hard disk and turns off the system power. To return the system to the original state, use the power button to turn the power on.

Selecting automatic profiles

A Power Profile is a set of timer values for a variety of system devices. PowerPanel automatically selects the profile associated with the application you are using and changes profiles as you switch between applications.

Power Management lets your system enter energy saving modes by levelling some energy consuming parameters, such as LCD brightness, or hard disk activity.

To select automatic profiles, proceed as follows:

- 1 Right-click the **PowerPanel** icon in the system tray.
- 2 Select **Profiles**.
- 3 Select **Automatic Profile Selection**.

Or,

- 1 Right-click the taskbar at the bottom of the screen.
- 2 Select **Toolbars** from the shortcut menu.
- 3 Select **Power Management**.
The **Power Management** toolbar appears in the taskbar.
You can change it into a floating window by dragging and dropping it on your desktop.
- 4 Click the first icon on the **Power Management** toolbar.
- 5 Select **Automatic Profile Selection**.

 You can customize the **PowerPanel** taskbar to suit your portable computing needs. You can edit the pre-defined **Power Management** settings or create new profiles.

When using the notebook with a battery, the CPU can be set to **Maximum Battery Life** mode to save battery power.

Displaying detailed battery information

You can display detailed information of your computer's battery. The following section briefly describes how to display your computer's general battery information.

To display battery information, proceed as follows:

- 1 Double-click the **PowerPanel** icon in the system tray.
The **Battery Information** dialog box appears.
- 2 Select the **Battery** tab.
This tab contains information such as the estimated battery life remaining and charging time.

Battery icon Battery status

	discharging: the icon is blue
	fully charged: the icon is completely blue with an AC power plug
	charging: the icon is blue with a red clip attached to the terminal
	no battery: the icon is blue with a yellow cross over it

Displaying CPU information

You can also view the performance level of your notebook. To do so, you just have to move your cursor over the CPU icon in your system tray. One of the two following icons will be displayed:

Maximum Performance: this icon appears when you use your notebook with the AC adapter, then the CPU operates at high speed.

Battery Optimized Performance: this icon appears when you use your notebook with a battery, then the CPU operates at low speed.

Selecting display modes

This notebook uses the ATI video controller. You can select which display is used when the notebook is connected to an external display. When you connect an external display, you can switch the display between your notebook's LCD and the external monitor. Before you can select a display, you need to shut down your notebook, connect the external display (TV, panel or monitor) to your notebook, and restart.

To select a display, proceed as follows:

- 1 Click the **Start** button, point to **Settings** and then point to **Control Panel**.
The **Control Panel** appears.
- 2 Double-click **Display**.
The **Display Properties** dialog box appears.
- 3 Click the **Settings** tab.

- 4 Click the **Advanced** button.
The **(Multiple Monitors) and Mobility Radeon Properties** dialog box appears.
 - 5 Click the **Displays** tab to set the display settings.
If you cannot see the movie on the external display, set the external display to **Primary**. Select the **Displays** tab and deselect the **Monitor** or **TV** bottom left button to change it from **Secondary** to **Primary**.
-  You cannot have a display on TV and on another display at the same time.
- You may not be able to display the notebook LCD screen and an external display or a projector at the same time, depending on the types of computer displays and projectors you are using.
- If the display resolution of your notebook is more than 800 x 600 dots, a part of the image cannot be displayed on your TV display. You can see the hidden area on your TV display by moving the cursor on your computer. If you want to display the full image, you need to change the display resolution of your notebook to 640 x 480 dots.
- Before turning on the computer, turn off the peripheral devices.
- If you want more information on the ATI video controller, click the ATI icon in the taskbar and click **Help**.

Creating an Emergency Repair Disk (ERD)

The backup utility helps you create a copy of the data on your hard disk. In the event that the original data on your hard disk is accidentally erased or overwritten, or becomes inaccessible because of a hard disk malfunction, you can use the copy to restore your lost or damaged data.

To create an Emergency Repair Disk, proceed as follows:

- 1 Click **Start**.
- 2 Point to **Programs, Accessories**, then **System Tools** and finally **Backup**. The **Backup** window appears.
- 3 From the **Tools** menu, choose **Create an Emergency Repair Disk**.
- 4 Follow the instructions that appear on your screen.

You will need a blank 1.44 MB floppy disk to create an Emergency Repair Disk.

It is recommended to recreate an Emergency Repair Disk each time your computer undergoes major changes (new program installation, ...).

The repair process relies on information that is saved in the system root/repair folder. You may not change or delete this folder.

Choosing **Also back up the registry to the repair directory**, will save your current registry files in a folder within your system root/repair folder. This is useful if you need to recover your system in the event your hard disk has failed.

Additional information on the repair process is available in the help files (see the **Getting Started online book** in *Introducing Windows® 2000 Professional*).

Using the product recovery CD-ROMs

The set of Product Recovery CD-ROMs supplied with your computer allow you to perform a full system recovery, and help you reinstall individual applications or the device drivers manually.

The system recovery process allows you to reinstall an image of the hard disk as it was before you started using your notebook.

Perform a **System Recovery** in the following cases:

- ❑ In the event of a serious system crash.
- ❑ If you want to modify the size of your partitions.

Perform an **Application Recovery** if you need to:

- ❑ Reinstall an individual driver if a device is not functioning properly.
- ❑ Reinstall an individual application if you have problems running it.

Performing a system recovery

Use this option only when your system is seriously damaged, e.g., if Windows® does not work any longer, or your PC behaves abnormally. The system recovery will completely reinstall the originally configured system on your C: drive. Your D: drive data will not be deleted if you choose to keep the same partition settings. If you decide to modify the size of your partitions, the existing data on both drives (C: and D:) will be deleted.

When performing a system recovery, you can opt for a **Standard Recovery** or an **Advanced Recovery**.

When choosing a **Standard Recovery**, you leave the current partition sizes untouched. When choosing an **Advanced Recovery**, you can adapt the partition sizes.

 You can only use these product recovery CD-ROMs on the Sony notebook you purchased and not on any other Sony PC or other manufacturer's PC!

To perform a system recovery, your port replicator should be disconnected.

The recovery process can last up to sixty minutes.

Please note that only the Advanced Recovery allows you to select the size of the C: partition when starting a recovery. When recovering your system, you also need to choose between FAT32 and NTFS for the file management system you want to use. The default option is FAT32. The Standard Recovery always chooses FAT32.

- ! Applying a system recovery means that you will lose all your data stored on your C: drive (and your D: drive if you modify partition settings).
- ! Make sure that your computer is connected to AC (not to batteries) before you attempt a system recovery.
- ! When the recovery is performed, you must remove the recovery CD-ROM from the drive before restarting the computer. If the CD-ROM is still in the drive, you will restart a recovery process.

Performing a standard system recovery

To perform a standard system recovery, proceed as follows:

- 1 Take the system recovery CD-ROM.
- 2 Turn on your computer (using AC power only) and insert the system recovery CD-ROM into the DVD-ROM drive.
- 3 Shut down your computer (**Start/Shut Down/Shut Down**).
- 4 Wait ten seconds.
- 5 Turn your computer back on.
- 6 On the first screen that appears, press **S (Standard)**.
The system recovery CD screen appears, asking you if you are really sure you want to continue.
- 7 Click **Y (Yes)**.
- 8 You will be asked again whether you are really sure to continue.
- 9 Confirm.

 By default, your notebook file management system is FAT32. Only the **advanced recovery** allows you to format your files using either **FAT32** or **NTFS**. You can change your FAT32 file system to NTFS at any time. However, make sure you fully understand the concept of file management system under Windows[®] 2000 before switching from FAT32 to another file management system. For more information, carefully read the Windows[®] 2000 documentation and/or ask your system or network administrator.

You can only convert from FAT32 to NTFS, but not from NTFS to FAT32.

Performing an advanced system recovery

To perform an advanced system recovery, proceed as follows:

- 1 Take the system recovery CD-ROM.
- 2 Turn on your computer (using AC power only) and insert the system recovery CD-ROM into the DVD-ROM drive.
- 3 Shut down your computer.
- 4 Wait ten seconds.
- 5 Turn your computer back on.
- 6 On the first screen that appears, press **A (Advanced)**.
The system recovery CD screen appears, asking if you wish any changes made to the partitions on your hard disk.
At this stage 3 options are available.
 - Recovering the system without changing partitions.
 - Recovering the system with modified partition sizes.
 - Aborting the recovery process.

Recovering the system without changing partitions

To recover the system without changing partitions, proceed as follows:

- 1 Press **C** to keep your current partitions.
This is the recommended option if you do not need to modify the partition sizes and if you want to restore your C: drive while keeping the data on your D: drive untouched.
- 2 Press **G** to proceed with the system recovery.
- 3 Select the file system you want to use: **FAT32** or **NTFS**.
- 4 Follow the instructions on the screen.

- 5 When the recovery process is finished, remove the product recovery CD-ROM from the drive.
- 6 Press any key to restart your notebook.

Recovering the system with modified partition sizes

To recover the system with modified partition sizes, proceed as follows:

- 1 Press **P** to modify partitions on your notebook.
Select this option only if you need to change the sizes of your partitions.
 - 2 On the next screen, press **Y** to confirm the deletion of the current partitions.
The next screen displays a selection of sizes for your new C: drive. According to the option you select, the recovery process will create 1 or 2 partitions on the hard disk.
 - 3 Confirm your selection on the next screen.
 - 4 Wait until the new partitions are created and the notebook reboots.
 - 5 Press **G** to proceed with the system recovery.
 - 6 Select the file system you want to use: **FAT32** or **NTFS**.
 - 7 Follow the instructions on the screen.
 - 8 When the recovery process is finished, remove the product recovery CD-ROM from the drive.
 - 9 Press any key to restart your notebook.
- ! Please note that this option will delete all existing data both on the C: and D: drives before starting the recovery.

Aborting the recovery process

The recovery process always warns you when the decision you are asked to take cannot be undone. Whenever possible, the recovery screens allow you either to go back to the previous screen, or to abort the recovery process.

Performing an application recovery

The application recovery utility allows you to reinstall individual applications. Reinstalling a program can fix the problems encountered if it does not correctly run anymore.

To perform an application recovery, proceed as follows:

- 1 Take the **last** product recovery CD-ROM.
- 2 Turn on your computer (using AC power only) and wait until Windows has booted up.
- 3 Insert the product recovery CD-ROM into the DVD-ROM drive.
- 4 Open the drive through **Windows Explorer** and click the **Apps** directory.
- 5 Open the directory that corresponds to the application you want to recover.
- 6 Double-click the **Setup** program.
- 7 Follow the instructions in the **Installer**.

 You must run the last product recovery CD-ROM from Windows.

The application will not run from DOS.

When performing an application recovery, you do not lose data on your hard disk.

In most cases, it is advised to uninstall an application before reinstalling it.

Reinstalling a device driver

Some applications or peripherals require specific drivers which you will not find in the Windows[®] **Drivers** folder. To help you find or restore typical drivers needed by your pre-installed applications, you can use the last product recovery CD-ROM.

To reinstall a device driver, proceed as follows:

- 1 First check whether the driver you want to reinstall is on the **last** product recovery CD-ROM. Only device drivers that are not delivered with Windows[®] can be found in the **Drivers** folder.

- 2 Check all underlying sub-directories for the appropriate driver.
- 3 Next, launch the **Add/Remove Hardware** Wizard (click **Start**, point to **Settings/Control Panel**, and then double-click **Add/Remove Hardware** to install the appropriate device).

Using partitioned drives

In **My Computer** or **Windows Explorer**, you may have noticed the availability of two drives (C: and D:). Your hard disk drive comes from the factory with 2 logical partitions: this does not mean that your computer contains two physical hard disks.

When you start using your notebook, your C: drive contains all the files required by Windows and other pre-installed software, while the D: drive is empty. The D: drive is the ideal storage space for all your documents and files, especially big ones like digital motion pictures captured by DVgate.

 Although you can perform a system recovery and change the partition settings in order to have one C: drive only, this option is not recommended for using video editing applications like DVgate.

To optimize data storage, use the C: drive to install new applications, and save all your documents and files to the D: drive. Moreover, doing so will prevent the loss of your data in the case you need to perform a system recovery.

Do not try to add, delete, or resize partitions unless you really need to. Changing partition settings might delete all your files on the hard disk.

If you need to perform a system recovery, but do not want to lose all the data stored on your hard disk, copy all the files you want to keep on the D: drive. During the system recovery process, choose to keep the current partition information. Doing so will keep your D: drive unchanged after the recovery process.

If you do need to change the size of your partitions, you can do so by performing a system recovery. In this case, it is important to be aware that all data on your hard disk will be deleted. If you need to keep existing files, be sure to back them up before performing the system recovery.
